This product includes software developed at ASM, AntLR, Apache ActiveMQ, Apache Ant, Apache Axiom, Apache Axis, Apache Axis 2, Apache Chemistry, Apache Common Http Client, Apache Common Http Core, Apache Commons, Apache Commons Bcel, Apache Commons Lang, Apache DataFu, Apache Derby Database Engine and Embedded JDBC Driver, Apache Geronimo, Apache HCatalog, Apache Hadoop, Apache Hbase, Apache Hive, Apache HttpClient, Apache HttpComponents Client, Apache JAMES, Apache Log4j, Apache Neethi, Apache POI, Apache Pig, Apache Thrift, Apache Tomcat, Apache Xml-RPC, Apache Zookeeper, CSV Tools, DataNucleus, Doug Lea, Ezmorph, Google's phone number handling library, Guava: Google Core Libraries for Java, H2 Embedded Database and JDBC Driver, HighScale Lib, HsqlDB, JSON, JUnit, Jackson Java JSON-processor, Java API for RESTful Services, Java Universal Network Graph, Jaxb, Jaxen, Jetty, Joda-Time, Json Simple, MapDB, MetaStuff, Paracel JDBC Driver, PostgreSQL JDBC Driver, Protocol Buffers - Google's data interchange format, Resty: A simple HTTP REST client for Java, SL4J: Simple Logging Facade for Java, SQLite JDBC Driver, The Castor Project, The Legion of the Bouncy Castle, Woden, Xalan-J, Xerces2, XmlBeans, XmlSchema Core, atinject. Licensed under their respective license.

Table of Contents

System Requirements	1
Data Quality: New Features	2
1. Talend Studio preferences	2
Data Quality: Bug Fixes / Change Log	3
Data Quality: Known Issues and Known Limitations	4
1. Java PSU not supported	4
2. Installation on Mac OS X Sierra	4
3. Installation on recent versions of Mac OS X with Gatekeeper	4
Documentation	6
1. Talend Help Center	6
2. Open issues	6

System Requirements

Users should refer to the *Talend Installation and Upgrade Guide* on the **Talend Help Center** (<http://help.talend.com>) for more information on Installation and System Requirements.

Data Quality: New Features

1. Talend Studio preferences

- A preference page has been added to the Studio preferences to enable users to set the default frequency table parameters. Users can now choose the default number of results shown in frequency and low frequency tables, when viewing analysis results in the Profiling perspective.

Data Quality: Bug Fixes / Change Log

A number of improvements within the entire product and significant bug fixes have been made.

See the corresponding Change Log on our bug tracking system for more details on the individual issues:

- <https://jira.talendforge.org/issues/?filter=25683>

Data Quality: Known Issues and Known Limitations

We encourage you to consult the JIRA bug tracking tool for a full list of open issues and to see which issues will be fixed in the upcoming release:

- <https://jira.talendforge.org/issues/?filter=25939>

1. Java PSU not supported

Talend is only supported on Java CPS Versions, not Java PSU.

Some users reported problems using Talend Studio with Java PSU versions (such as jdk8_u92), but when reverting to a Java CPS Version (such as jdk8_u91) the problem was resolved.

See also: <http://www.oracle.com/technetwork/java/javase/cpu-psu-explained-2331472.html>.

2. Installation on Mac OS X Sierra

By default, Mac OS X Sierra sets all downloaded files to "quarantine". This prevents you running the Studio.

To launch Talend Studio on Mac OS X Sierra, do the following:

1. Unzip the Studio as usual.
2. Open a **Terminal** window on the folder where you unzipped your Studio.
3. Execute either of the following commands.

```
xattr -d com.apple.quarantine *
```

or

```
xattr -c *
```

You can now launch the Studio as usual.

3. Installation on recent versions of Mac OS X with Gatekeeper

Users with a recent version of Mac OS X may need to update their Gatekeeper settings to install Talend products. Gatekeeper is available from OS X 10.7.5.

To do so:

1. Click the Apple icon, and then click **System Preferences**.
2. Under **System Preferences**, click **Security & Privacy**.

3. Under **Security & Privacy**, click the **General tab**.
4. Click the lock icon next to **Click the lock to make changes**, and then identify yourself using the user name and password for an account with administrator rights. Only administrators can change the security settings.
5. Under **Allow apps download from**, select the **Anywhere** radio button then confirm your choice in the dialog box that opens.
6. Close all windows, so that your Mac automatically locks the **Security & Privacy** settings for you again.
7. Install Talend Studio (or whatever other executable you want to install) by following the usual installation procedure. Note that, when you double click the **Talend-Studio-macosx-cocoa.app** file, you will see a warning saying that it is an application downloaded from the Internet, but if you click **Open**, your Mac should let you install it without further issues.
8. Once you have completed the installation process, you can repeat the above steps to return your **Security & Privacy** settings to their previous value if you want.

Documentation

1. Talend Help Center

Find out more about how to get the most out of your Talend products on the Talend Help Center: <http://help.talend.com>.

Talend Help Center has undergone a major refurbishment for this release.

2. Open issues

We encourage you to consult the JIRA bug tracking tool for a full list of open issues:
